

Wesso, Inc. supplies tungsten carbide components used in decanter style centrifuges.

We stock many items such as the Tapered Discharge Nozzles used in NX style machines, the "Half Moons" used on the 360° discharge units, the Tiles used on the 3400 series units as well as the larger tiles.

The Tungsten Carbide on our tiles has a hardness of 93.0 Rockwell A which is harder and more abrasion resistant than any tile on the market. The backing pads we use are 17-4 ph stainless steel with a minimum chrome content of 17% for absolute maximum corrosion resistance.

Your sketches or used samples can be custom made into quality new components. Our quality, prices and services are unmatched.
